

# SOSAA RSM using the Icarus Architecture

Input:  $\bar{X} := (X, X - X_{train})$

Pairwise Difference Regression

## Out-of-Distribution Detector

Confidence Score

Trained with

$$\bar{X}_{ID} \cup \bar{X}_{OOD}$$

## Prediction Model

Point-Prediction

Trained with

$$(\bar{X}_{train}, Y_{train})$$

## Uncertainty Quantifier

Uncertainty Level

Calibrated with

$$Y_{valid} - \hat{Y}_{valid}$$

Output:  $(Y \approx \hat{Y} \pm \hat{\sigma}) \mid c$

prediction with uncertainty level,  
conditioned by confidence score
